

NLP

step = 96

θ

The figure shows a 2D plot with a vertical axis labeled 'NLP' and a horizontal axis labeled with the Greek letter θ . An orange curve represents a function, which is non-convex. It starts at a low value on the left, rises to a peak, then falls to a local minimum. A solid black dot is placed at this local minimum, and the label 'step = 96' is positioned directly above it. After the minimum, the curve begins to rise again towards the right edge of the plot.
