

NLP

step = 88

θ

The figure shows a 2D plot with a vertical axis labeled 'NLP' and a horizontal axis labeled with the Greek letter θ . An orange curve represents a function, which is non-convex. It starts at a low value on the left, rises to a high peak, then falls to a local minimum, and finally rises again towards the right. A solid black circle is placed on the curve at its local minimum point. Above this point, the text 'step = 88' is written in black.
