

NLP

step = 2

θ

The figure shows a 2D plot with a vertical axis labeled 'NLP' and a horizontal axis labeled with the Greek letter θ . An orange curve represents a function. The curve starts at a low value on the left, rises to a high peak, then falls to a local minimum, and finally rises again towards the right. A solid black dot is placed on the curve at its local minimum. Above this dot, the text 'step = 2' is written in black. The horizontal axis is represented by a thin grey line at the bottom of the plot area.
