

NLP

step = 97

θ

The figure shows a 2D plot with a vertical axis labeled 'NLP' and a horizontal axis labeled with the Greek letter θ . An orange curve represents a function that is non-convex, featuring a local minimum and a local maximum. A solid black dot is placed at the local minimum of the curve. Above this dot, the text 'step = 97' is written in black. The curve starts at a low value on the left, rises to a peak, falls to the minimum, and then rises again towards the right edge of the plot.
