

NLP

step = 22

$\theta$

The figure shows a 2D plot with a vertical axis labeled 'NLP' and a horizontal axis labeled with the Greek letter  $\theta$ . An orange curve represents a function, which is non-convex. It starts at a low value on the left, rises to a high peak, then falls to a local minimum. A solid black dot is placed at this local minimum on the curve. Above this dot, the text 'step = 22' is written in black. The curve then rises again towards the right edge of the plot.
